The effect of *p*-aminosalicylic acid on the activity of serum lipase. László Perényi and László Jánosy (Univ. Budapest, Hung.). *Kísérlet Orvostudomány* 2, 3-312; 8 (1950).---Lipase activity was examd. in serum treated with various amounts of *p*-aminosalicylic acid (I) dissolved in 0.01 N NaOH and adjusted to pH 7.6 with a 0.1 M phosphate buffer. *In vitro* I showed a definite inhibiting effect even in a concn. of 1.0 mg. % when allowed to stand 24 hrs. The degree of inhibition was 50% at a concn. of 10 mg. %, and 100% at a 17 mg. % concn. Acetylated I had no inhibiting effect. *m*-Aminophenol, *p*-aminobenzenesulfonamide, and *p*-aminobenzoic acid showed similar but weaker effects, whereas salicylic acid was ineffective. The inhibiting effect is caused by the free NH₂ group in the *m*-position to the OH group. Clinical expts. proved that I *in vivo* is ineffective both in humans and in rabbits.

Jánosy, L. Studies on the theory of cascades. Acta
Phys. Acad. Sci. Hungar. 2, 289-333 (1952). (Russian
summary)

In the theory of nucleon cascades one has to consider processes in which a single particle of known energy, on passage through matter, gives rise to secondary particles of various energies, the number and variety of which as well as their energy distributions are random variables subject to laws of probability. A typical problem in the theory is to determine the probability of occurrence at a certain depth x of a definite number of particles of specified variety and with energies in specified intervals when a particle of known energy is incident at $x=0$. It is clear that it will be difficult to even formulate the relevant "diffusion equations" without some special notation. The present paper is principally devoted to describing a notation and developing a formalism which will enable the equations and the problems of the subject to be compactly formulated. The basic equation of the theory is one which the author calls the "G-equation." Simpler examples of the author's methods have been published earlier [Jánosy, Proc. Roy. Irish Acad. Sect. A. 53, 181-188 (1950); these Rev. 13, 569; Messel and Gardner, Physical Rev. (2) 84, 1256 (1951); these Rev. 13, 569].
S. Chandrasekhar. (Williams Bay, Wis.).

Title : Investigations in the theory of Cascades. II

Periodical : Zhur. eksp. i teor. fiz. 26, 518-536, May 1954

Abstract : Shows that many familiar successes of the theory of cascades can be simply derived from the generalized G-equations as obtained in Part I (L. Yanoshi, ZhETF 26,386, 1954). Among these successes are the results connected with the cross-sectional distribution of atmospheric showers. Refers to 3 of his earlier works, published in England in 1950.

Author : Yanoshi, L. [Janossy, L.]

Title : Statistical problems of the electron multiplier

Periodical : Zhur. eksp. i teor. fiz. 28, 679-694, Jun 1955

Abstract : The author expounds a method for determining the function describing the distribution of amplitudes of impulses (momenta) in an electron multiplier if one knows the probability of occurrence of n secondary electrons in one elementary act. He solves the problem of determining the probability of this elementary act (event) if one knows from the experimental data the curve describing the distribution of impulses (momenta) according to amplitudes in a multiplier. Author : Yanoshi, L.

Title : Generalized Form of the Diffusion Equation for a Single Particle

Orig Pub : Zh. eksperim. i teor. fiziki, 1956, 30, No 2, 351-361

Abstract : The diffusion process is described by a function $\phi(A, U, t)$, where A represents the parameters determining the state of the particle (components of a vector $A_k(t)$), U determines the intervals of the components of A , t is the time, and ϕ is the probability that a particle, which is in a state A at the instant $t' = 0$, assumes at the instant $t' = t$ such a state A' , which lies inside U . The state of the particle may change by collisions between particles. The probability of the $A \rightarrow A''$ transition by collision is denoted by $w(A, A'') dA'' dt$, where

$$w(A(t'')) = \int_{A''} w(A(t''), A'') dA''$$

The general diffusion equation is obtained in the following form

$$\left(\frac{\partial}{\partial t} + w(A) - \sum_{k,l} A_k^{(l+1)} \frac{\partial}{\partial A_k^{(l)}} \right) \phi(A, U, t) = \int_{A''} w(A, A'') \phi(A, U, t) dA.$$

Category : USSR/Nuclear Physics - Origin of Charged and Neutral Particles through Matter

Abs Jour : Ref Zhur - Fizika, No 1, 1957, No 581

By way of example the author discusses the problem of the distribution of the areas between a straight line and the projections of the trajectory of a particle in an emulsion.

Card : 2/2

International Conference (Cont.)

HUN/1911

TABLE OF CONTENTS:

FIRST SESSION

SHOWERS AND INTENSITY MEASUREMENTS

1. Janossy, L., and L. Nagy. Experiments on the Rossi Curve 10
2. Mitrani, L. Measurements of the Rossi Curve at Great
Absorber Thicknesses 11
3. Messerschmidt, W. New Apparatus for the Evaluation of
Cosmic Radiation Measurements in Halle and its Initial
Results 17
4. Bartels, G. New Concepts in the Correction of Meteorologi-
cal Effects in Cosmic Radiation 19

SECOND SESSION

EXTENSIVE AIR SHOWERS

1. Dobrotin, N.A. The Study of Nuclear Interaction in Ultra-
high Energies 24
2. Nikol'skiy, S.I., and G.B. Khristiansen. The Spatial
Dispersion of Electrons in Extensive Atmospheric Showers
Producing Primary Particles of Various Energies 40

Card 2/6

International Conference (Cont.)

HUN/1911

3. Zawadski, A. The Density Spectrum of Extensive Air Showers
230 m. Above Sea Level 96
4. Chaploupka, P. A Few Remarks on the Geomagnetic Effect of
Extensive Air Showers 110

FOURTH SESSION

EMULSIONS

1. Janossy, L. On the Determination of the Energy of a Particle
From Its Track in an Emulsion 113
2. Alper, S., J. Auslander, C. Bercea, and E.M. Friedlander. On
Mass Estimation of Singly Charged Particles in Emulsions by
Scattering Measurements 127
3. Gurevich, I.I. Study of Elementary Processes of Nuclear
Interaction by Photo Emulsion Methods (not incl)
4. Miesowicz, M.; O. Stanisiz and W. Wolter. Investigation of
an Electromagnetic Cascade of Very High Energy in the
First Stage of its Development 128

Card 4/6

International Conference (Cont.)

HUN/1911

5. Friedlander, E.M. A High Energy Meson Shower With an Anomalous Angular Spread 144

FIFTH SESSION

1. Filipkowski, A.; J. Gierulaxx, and P. Zielinski. Survey of the Experimental Hyperfragment Data 145
2. Hsiao, C., J.C. Cheng, M. Lu, and K.C. Wang. Some Heavy Unstable Particle Events Observed With a Multiplate Cloud Chamber 172
3. Friedlander, E.M., and M.E. Mayer. Some Remarks on the Possible Cascade Decay of the τ -Meson 177
4. Petržilka, V. New Measurements of the Life Time of μ -Mesons From Anomal Absorption Using a Graphite Absorber and Nuclear Emulsions 178
5. Kiss, D. Measurements of the Life Time of μ -Mesons 184
6. Mayer, M.E., and C. Eftimiū. On Fermion Pair Creation by Charged Particles of Spin $1/2$ and 0 in an External Field 185

Card 5/6
